SUBJECT INDEX

Analysis of electrostatic imaging and screen-film imaging in mammography, detective quantum efficiency (DQE), 162
Analysis of the lung fields in chest X rays, automated screening of chest X rays: texture, 108
Application of computed tomographic (CT) imaging to radiotherapy planning, 348
Artifact in second-order statistics from computed tomography (CT) images, information and, 250
Artifacts and determination of electron density and atomic number from computed tomographic (CT) scans, correction of spectral, 333
Aspects of the convolution method for image reconstruction from projections, 271
Atomic number from computed tomographic (CT) scans, correction of spectral artifacts and determination of electron density and, 333
Automated screening of chest X rays: texture analysis of the lung fields in chest X rays, 108

Bars and discs in quantum noise, detection of, 34
Beam characteristics, measurement of time variations of x-ray, 312
Beam-hardening correction method in computerized tomography, illustration of a, 264
Beam-hardening corrections, uncertainties generated by computed tomography (CT), 258
Breast microcalcifications: *in vitro* studies using a wide variety of mammography techniques, radiographic detectability of, 129
Breast, progress in ultrasonic computed tomography (CT) of the, 372
Breast thermography in given conditions, making an equipment allowing special liquid crystals sheets to be used for, 143

$CaWO_4$ intensifying screens, measurement of the x-ray-induced light photons emitted from radiographic, 8
(CT) beam-hardening corrections, uncertainties generated by computed tomography, 258
(CT) of the breast, progress in ultrasonic computed tomography, 372
(CT) and conventional radiography, contrast-detail-dose evaluation of computed radiography: comparison with computed tomography, 41
(CT) geometries, qualitative prediction of image discrepancies due to object-time dependence in several computed tomography, 279
(CT) images, display system for computed tomographic, 244
(CT) images, information and artifact in second-order statistics from computed tomography, 250
(CT) images, use of scattered radiation measurements in radiotherapy dose calculations based on computed tomographic, 342
(CT) imaging to radiotherapy planning, the application of computed tomography, 348
(CT) reconstruction: the detection of small objects, the detective quantum efficiency of computed tomographic, 291
(CT) scan, effect of slice thickness on depth-dose distribution of a computed tomography, 238
(CT) scanner, an experimental computed tomographic, 324
(CT) scanner geometry, optimizing computed tomography, 225
(CT) scanner, performance evaluation of a fourth-generation computed tomography, 194
(CT) scans, correction of spectral artifacts and determination of electron density and atomic number from computed tomographic, 333
Camera for recording fluoroscopic images, use of a multiformat, 369
Case series review results to evaluation of individual cases in diagnostic radiology, how to apply, 364
Cases in diagnostic radiolcgy, how to apply case series review results to evaluation of individual, 364
Characteristics, measurement of time variations of x-ray beam, 312
Characteristics of a translate-rotate head scanner with xenon detectors, performance, 208
Chest examinations, specifications and requirements of idealized radiographic equipment for routine, 185
Chest radiography, government guidelines versus image quality in, 58
Chest X rays: texture analysis of the lung fields in chest X rays, automated screening of, 108
Clinical use of diagnostic x-ray equipment, monitoring the, 174

Comparison with computed tomography (CT) and conventional radiography, contrast-detail-dose evaluation of computed radiography:, 41
Comparison of intensity and time scale sensitometric methods for evaluating screen-film systems, 21
Computed radiography: comparison with computed tomography (CT) and conventional radiography, contrast-detail-dose evaluation of, 41
Computed tomographic (CT) images, display system for, 244
Computed tomographic (CT) images, use of scattered radiation measurements in radiotherapy dose calculations based on, 342
Computed tomographic (CT) imaging to radiotherapy planning, the application of, 348
Computed tomographic (CT) reconstruction: the detection of small objects, the detective quantum efficiency of, 291
Computed tomographic (CT) scanner, an experimental, 324
Computed tomographic (CT) scans, correction of spectral artifacts and determination of electron density and atomic number from, 333
Computed tomographic units, evaluation of, 216
Computed tomography (CT) beam-hardening corrections, uncertainties generated by, 258
Computed tomography (CT) of the breast, progress in ultrasonic, 372
Computed tomography (CT) and conventional radiography, contrast-detail-dose evaluation of computed radiography: comparison with, 41
Computed tomography (CT) geometries, qualitative prediction of image discrepancies due to object-time dependence in several, 279
Computed tomography (CT) images, information and artifact in second-order statistics from 250

Computed tomography (CT) scan, effect of slice thickness on depth-dose distribution of a, 238
Computed tomography (CT) scanner geometry, optimizing, 225
Computed tomography (CT) scanner, performance evaluation of a fourth-generation, 194
Computed tomography and ultrasound video photography, film selection considerations for, 75
Computer electronic radiography for early detection of vascular disease, 88
Computer generation of three-dimensional phantoms and their cone-beam x-ray projections, rapid, 287
Computer-simulated images for the perceptual evaluation of physical parameters in radiographic image formation, 48
Computerized data management system for diagnostic radiology—equipment performance and service, 168
Computerized tomography, illustration of a beam-hardening correction method in, 264
Cone-beam x-ray projections, rapid computer generation of three-dimensional phantoms and their, 287
Contrast-detail-dose evaluation of computed radiography: comparison with computed tomography (CT) and conventional radiography, 41
Contrast, fore-and-aft rotating aperture wheel (RAW) device for improving radiographic, 98
Conventional radiography, contrast-detail-dose evaluation of computed radiography: comparison with computed tomography (CT) and, 41
Conversion of a radiology department to rare-earth screen-film systems, 52
Convolution method for image reconstruction from projections, aspects of the, 271
Correction method in computerized tomography, illustration of a beam-hardening, 264
Correction of spectral artifacts and determination of electron density and atomic number from computed tomographic (CT) scans, 333
Corrections, uncertainties generated by computed tomography (CT) beam-hardening, 258
Crystals sheets to be used for breast thermography in given conditions, making an equipment allowing special liquid, 143

(DQE) analysis of electrostatic imaging and screen-film imaging in mammography, detective quantum efficiency, 162
(DSR)—a high temporal resolution volume scanner, physics and technical considerations in the design of the dynamic spatial reconstructor, 382
Data management system for diagnostic radiology-equipment performance and service, computerized, 168
Density and atomic number from computed tomographic (CT) scans, correction of spectral artifacts and determination of electron, 333
Depth-dose distribution of a computed tomography (CT) scan, effect of slice thickness on, 238
Design and implementation of a radiology information system, 180
Detectability of breast microcalcifications: *in vitro* studies using a wide variety of mammography techniques, radiographic, 129
Detection of bars and discs in quantum noise, 34
Detection of small objects, the detective quantum efficiency of computed tomographic (CT) reconstruction: the, 291
Detection of vascular disease, computer electronic radiography for early, 88
Detective quantum efficiency (DQE) analysis of electrostatic imaging and screen-film imaging in mammography, 162
Detective quantum efficiency of computed tomographic (CT) reconstruction: the detection of small objects, 291
Detector system for high-resolution dynamic medical thermographic diagnosis, new, 148
Detectors, performance characteristics of a translate-rotate head scanner with xenon, 208
Determination of electron density and atomic number from computed tomographic (CT) scans, correction of spectral artifacts and, 333
Determination of high-intensity x-ray spectra, 2
Developments in non-silver halide diagnostic imaging systems and their potential, recent, 66
Device for improving radiographic contrast, fore-and-aft rotating aperture wheel (RAW), 98
Diagnosis, new detector system for high-resolution dynamic medical thermographic, 148
Diagnostic imaging systems and their potential, recent developments in non-silver halide, 66
Diagnostic radiologic studies—fetal vs parenteral radiosensitivity, exposure from, 360
Diagnostic radiology—equipment performance and service, computerized data management system for, 168
Diagnostic radiology, how to apply case series review results to evaluation of individual cases in, 364
Diagnostic x-ray equipment, monitoring the clinical use of, 174
Dispersion in patient physical characteristics and the concept of the average patient: implications for dose minimization in mammography, 157
Display system for computed tomographic (CT) images, 244
Discrepancies due to object-time dependence in several computed tomography (CT) geometries, qualitative prediction of image, 279
Discs in quantum noise, detection of bars and, 34
Disease, computer electronic radiography for early detection of vascular, 88
Distribution of a computed tomography (CT) scan, effect of slice thickness on depth-dose, 238
Dose calculations based on computed tomographic (CT) images, use of scattered radiation measurements in radiotherapy, 342
Dose distribution of a computed tomography (CT) scan, effect of slice thickness on depth-, 238
Dose evaluation of computed radiography: comparison with computed tomography (CT) and conventional radiography, contrast-detail-, 41

Dose measurements, mammography with magnification and grids detail visibility and, 135
Dose minimization in mammography, dispersion in patient physical characteristics and the concept of the average patient: implications for, 157
Dynamic medical thermographic diagnosis, new detector system for high-resolution, 148
Dynamic spatial reconstructor (DSR)—a high temporal resolution volume scanner, physics and technical considerations in the design of the, 382

Early detection of vascular disease, computer electronic radiography for, 88
Effect of slice thickness on depth-dose distribution of a computed tomography (CT) scan, 238
Efficiency (DQE) analysis of electrostatic imaging and screen-film imaging in mammography, detective quantum, 162
Efficiency of computed tomographic (CT) reconstruction: the detection of small objects, the detective quantum, 291
Electron density and atomic number from computed tomographic (CT) scans, correction of spectral artifacts and determination of, 333
Electronic radiography for early detection of vascular disease, computer, 88
Electrostatic images, laser reaout of, 81
Electrostatic imaging and screen-film imaging in mammography, detective quantum efficiency (DQE) analysis of, 162
Equipment allowing special liquid crystals sheets to be used for breast thermography in given conditions, making an, 143
Equipment, monitoring the clinical use of diagnostic x-ray, 174
Equipment performance and service, computerized data management system for diagnostic radiology-, 168
Equipment for routine chest examinations, specifications and requirements of idealized radiographic, 185
Evaluation of computed radiography: comparison with computed tomography (CT) and conventional radiography, contrast-detail-dose, 41
Evaluation of computed tomographic units, 216
Evaluation of a fourth-generation computed tomography (CT) scanner, performance, 194
Evaluation of individual cases in diagnostic radiology, how to apply case series review results to, 364
Evaluation of physical parameters in radiographic image formation, computer-simulated images for the perceptual, 48
Examinations, specifications and requirements of idealized radiographic equipment for routine chest, 185
Experimental computed tomographic (CT) scanner, 324
Exposure from diagnostic radiologic studies—fetal vs parenteral radiosensitivity, 360
Exposures to patients from radiological procedures, 300

Fetal vs parenteral radiosensitivity, exposure from diagnostic radiologic studies, 360
Film selection considerations for computed tomography and ultrasound video photography, 75
Fluoroscopic images, use of a multiformat camera for recording, 369
Fore-and-aft rotating aperture wheel (RAW) device for improving radiographic contrast, 98
Formation, computer-simulated images for the perceptual evaluation of physical parameters in radiographic image, 48
Fourth-generation computed tomography (CT) scanner, performance evaluation of a, 194

Generation of three-dimensional phantoms and their cone-beam x-ray projections, rapid computer, 287
Geometries, qualitative prediction of image discrepancies due to object-time dependence in several computed tomography (CT), 279
Geometry, optimizing computed tomography (CT) scanner, 225
Government guidelines versus image quality in chest radiography, 58
Grids detail visibility and dose measurements, mammography with magnification and, 135
Guidelines versus image quality in chest radiography, government, 58

Halide diagnostic imaging systems and their potential, recent developments in non-silver, 66
Head scanner with xenon detectors, performance characteristics of a translate-rotate, 208
High-intensity x-ray spectra, determination of, 2
High-resolution dynamic medical thermographic diagnosis, new detector system for, 148
High temporal resolution volume scanner, physics and technical considerations in the design of the dynamic spatial reconstructor (DSR)—a, 382
Historical review of mammographic imaging techniques in terms of image quality and reduced radiation dose, 120
How to apply case series review results to evaluation of individual cases in diagnostic radiology, 364

Illustration of a beam-hardening correction method in computerized tomography, 264
Image discrepancies due to object-time dependence in several computed tomography (CT) geometries, qualitative prediction of, 279
Image formation, computer-simulated images for the perceptual evaluation of physical parameters in radiographic image formation, 48
Image intensifiers, quantum noise measurements for x-ray, 16
Image quality in chest radiography, government guidelines versus, 58
Image quality and reduced radiation dose, historical review of mammographic imaging techniques in terms of, 120
Image reconstruction from projections, aspects of the convolution method for, 271
Images, display system for computed tomographic (CT), 244
Images, information and artifact in second-order statistics from computed tomography (CT), 250
Images, laser readout of electrostatic, 81
Images for the perceptual evaluation of physical parameters in radiographic image formation, computer-simulated, 48

Images, use of a multiformat camera for recording fluoroscopic, 369
Images, use of scattered radiation measurements in radiotherapy dose calculations based on computed tomographic (CT), 342
Imaging in mammography, detective quantum efficiency (DQE) analysis of electrostatic imaging and screen-film, 162
Imaging, nuclear magnetic resonance zeugmatographic, 356
Imaging performance, phantoms for testing x-ray, 319
Imaging to radiotherapy planning, the application of computed tomography (CT), 348
Imaging and screen-film imaging in mammography, detective quantum efficiency (DQE) analysis of electrostatic, 162
Imaging systems and their potential, recent developments in non-silver halide diagnostic, 66
Imaging techniques in terms of image quality and reduced radiation dose, historical review of mammographic, 120
Implementation of a radiology information system, the design and, 180
Improving radiographic contrast, fore-and-aft rotating aperture wheel (RAW) device for, 98
Information and artifact in second-order statistics from computed tomography (CT) images, 250
Information system, the design and implementation of a radiology, 180
Individual cases in diagnostic radiology, how to apply case series review results to evaluation of, 364
Intensifiers, quantum noise measurements for x-ray image, 16
Intensifying screens, measurement of the x-ray-induced light photons emitted from radiographic $CaWO_4$, 8
Intensity and time scale sensitometric methods for evaluating screen-film systems, comparison of, 21
In vitro studies using a wide variety of mammography techniques, radiographic detectability of breast microcalcifications:, 129

Laser readout of electrostatic images, 81
Light photons emitted from radiographic $CaWO_4$ intensifying screens, measurement of the x-ray-induced, 8
Liquid crystals sheets to be used for breast thermography in given conditions, making an equipment allowing special, 143
Lung fields in chest X rays, automated screening of chest X rays: texture analysis of the, 108

Magnetic resonance zeugmatographic imaging, nuclear, 356
Magnification and grids detail visibility and dose measurements, mammography with, 135
Making an equipment allowing special liquid crystals sheets to be used for breast thermography in given conditions, 143

Mammographic imaging techniques in terms of image quality and reduced radiation dose, historical review of, 120
Mammography, detective quantum efficiency (DQE) analysis of electrostatic imaging and screen-film imaging in, 162
Mammography, dispersion in patient physical characteristics and the concept of the average patient: implications for dose minimization in, 157
Mammography techniques, radiographic detectability of breast microcalcifications: *in vitro* studies using a wide variety of, 129
Mammography with magnification and grids detail visibility and dose measurements, 135
Management system for diagnostic radiology—equipment performance and service, computerized data, 168
Measurement of time variations of x-ray beam characteristics, 312
Measurement of the x-ray-induced light photons emitted from radiographic $CaWO_4$ intensifying screens, 8
Measurements, mammography with magnification and grids detail visibility and dose, 135
Measurements in radiotherapy dose calculations based on computed tomographic (CT) images, use of scattered radiation, 342
Measurements for x-ray image intensifiers, quantum noise, 16
Medical thermographic diagnosis, new detector system for high-resolution dynamic, 148
Microcalcifications: *in vitro* studies using a wide variety of mammography techniques, radiographic detectability of breast, 129
Micro-dose radiography: physics of a system, 368
Monitoring the clinical use of diagnostic x-ray equipment, 174
Multiformat camera for recording fluoroscopic images, use of a, 369

New detector system for high-resolution dynamic medical thermographic diagnosis, 148
New sensitometric method, 28
Noise, detection of bars and discs in quantum, 34
Noise measurements for x-ray image intensifiers, quantum, 16
Non-silver halide diagnostic imaging systems and their potential, recent developments in, 66
Nuclear magnetic resonance zeugmatographic imaging, 356

Objects, the detective quantum efficiency of computed tomographic (CT) reconstruction: the detection of small, 291
Object-time dependence in several computed tomography (CT) geometries, qualitative prediction of image discrepancies due to, 279
Optimizing computed tomography (CT) scanner geometry, 225

Parameters in radiographic image formation, computer-simulated images for the perceptual evaluation of physical, 48
Parenteral radiosensitivity, exposure from diagnostic radiologic studies—fetal vs, 360
Patient physical characteristics and the concept of the average patient: implications for dose minimization in mammography, dispersion in, 157
Patients from radiological procedures, exposures to, 300
Perceptual evaluation of physical parameters in radiographic image formation, computer-simulated images for the, 48
Performance characteristics of a translate-rotate head scanner with xenon detectors, 208
Performance evaluation of a fourth-generation computed tomography (CT) scanner, 194
Performance, phantoms for testing x-ray imaging, 319
Performance and service, computerized data management system for diagnostic radiology—equipment, 168
Phantoms and their cone-beam x-ray projections, rapid computer generation of three-dimensional, 287
Phantoms for testing x-ray imaging performance, 319
Photography, film selection considerations for computed tomography and ultrasound video, 75
Photons emitted from radiographic $CaWO_4$ intensifying screens, measurement of the x-ray-induced light, 8
Physical characteristics and the concept of the average patient: implications for dose minimization in mammography, dispersion in patient, 157
Physical parameters in radiographic image formation, computer-simulated images for the perceptual evaluation of, 48
Physics of a system, micro-dose radiography:, 368
Physics and technical considerations in the design of the dynamic spatial reconstructor (DSR)—a high temporal resolution volume scanner, 382
Planning, the application of computed tomographic (CT) imaging to radiotherapy, 348
Prediction of image discrepancies due to object-time dependence in several computed tomography (CT) geometries, qualitative, 279
Procedures, exposures to patients from radiological, 300
Progress in ultrasonic computed tomography (CT) of the breast, 372
Projections, aspects of the convolution method for image reconstruction from, 271
Projections, rapid computer generation of three-dimensional phantoms and their cone-beam x-ray, 287

Qualitative prediction of image discrepancies due to object-time dependence in several computed tomography (CT) geometries, 279
Quality in chest radiography, government guidelines versus image, 58
Quantum efficiency (DQE) analysis of electrostatic imaging and screen-film imaging in mammography, detective, 162
Quantum efficiency of computed tomographic (CT) reconstruction: the detection of small objects, the detective, 291
Quantum noise, detection of bars and discs in, 34
Quantum noise measurements for x-ray image intensifiers, 16

(RAW) device for improving radiographic contrast, fore-and-aft rotating aperture wheel, 98
Radiation dose, historical review of mammographic imaging techniques in terms of image quality and reduced, 120
Radiation measurements in radiotherapy dose calculations based on computed tomographic (CT) images, use of scattered, 342
Radiographic $CaWO_4$ intensifying screens, measurement of the x-ray-induced light photons emitted from, 8
Radiographic contrast, fore-and-aft rotating aperture wheel (RAW) device for improving, 98
Radiographic detectability of breast microcalcifications: *in vitro* studies using a wide variety of mammography techniques, 129
Radiographic equipment for routine chest examinations, specifications and requirements of idealized, 185
Radiography: comparison with computed tomography (CT) and conventional radiography, contrast-detail-dose evaluation of computed, 41
Radiography, contrast-detail-dose evaluation of computed radiography: comparison with computed tomography (CT) and conventional, 41
Radiography for early detection of vascular disease, computer electronic, 88
Radiography, government guidelines versus image quality in chest, 58
Radiography: physics of a system, micro-dose, 368
Radiological procedures, exposures to patients from, 300
Radiologic studies—fetal vs parenteral radiosensitivity, exposure from diagnostic, 360
Radiology department to rare-earth screen-film systems, conversion of a, 52
Radiology—equipment performance and service, computerized data management system for diagnostic, 168
Radiology, how to apply case series review results to evaluation of individual cases in diagnostic, 364
Radiology information system, the design and implementation of a, 180
Radiosensitivity, exposure from diagnostic radiologic studies—fetal vs parenteral, 360
Radiotherapy dose calculations based on computed tomographic (CT) images, use of scattered radiation measurements in, 342
Radiotherapy planning, the application of computed tomographic (CT) imaging to, 348
Rapid computer generation of three-dimensional phantoms and their cone-beam x-ray projections, 287
Rare-earth screen-film systems, conversion of a radiology department to, 52

Readout of electrostatic images, laser, 81
Recent developments in non-silver halide diagnostic imaging systems and their potential, 66
Recording fluoroscopic images, use of a multiformat camera for, 369
Reconstruction: the detection of small objects, the detective quantum efficiency of computed tomographic (CT), 291
Reconstruction from projections, aspects of the convolution method for image, 271
Reconstructor (DSR)—a high temporal resolution volume scanner, physics and technical considerations in the design of the dynamic spatial, 382
Requirements of idealized radiographic equipment for routine chest examinations, specifications and, 185
Resolution volume scanner, physics and technical considerations in the design of the dynamic spatial reconstructor (DSR)—a high temporal, 382
Resonance zeugmatographic imaging, nuclear magnetic, 356

Results to evaluation of individual cases in diagnostic radiology, how to apply case series review, 364
Review of mammographic imaging techniques in terms of image quality and reduced radiation dose, historical, 120
Review results to evaluation of individual cases in diagnostic radiology, how to apply case series, 364
Rotating aperture wheel (RAW) device for improving radiographic contrast, fore-and-aft, 98

Scan, effect of slice thickness on depth-dose distribution of a computed tomography (CT), 238
Scanner, an experimental computed tomographic (CT), 324
Scanner geometry, optimizing computed tomography (CT), 225
Scanner, performance evaluation of a fourth-generation computed tomography (CT), 194
Scanner, physics and technical considerations in the design of the dynamic spatial reconstructor (DSR)—a high temporal resolution volume, 382
Scanner with xenon detectors, performance characteristics of a translate-rotate head, 208
Scans, correction of spectral artifacts and determination of electron density and atomic number from computed tomographic (CT), 333
Scattered radiation measurements in radiotherapy dose calculations based on computed tomographic (CT) images, use of, 342
Screen-film combinations, selection of, 306
Screen-film imaging in mammography, detective quantum efficiency (DQE) analysis of electrostatic imaging and, 162
Screen-film systems, comparison of intensity and time scale sensitometric methods for evaluating, 21
Screen-film systems, conversion of a radiology department to rare-earth, 52
Screening of chest X rays: texture analysis of the lung fields in chest X rays, automated, 108
Screens, measurement of the x-ray-induced light photons emitted from radiographic $CaWO_4$ intensifying, 8
Second-order statistics from computed tomography (CT) images, information and artifact in, 250
Selection of screen-film combinations, 306
Sensitometric method, new, 28
Sensitometric methods for evaluating screen-film systems, comparison of intensity and time scale, 21
Series review results to evaluation of individual cases in diagnostic radiology, how to apply case, 364
Slice thickness on depth-dose distribution of a computed tomography (CT) scan, effect of, 238
Small objects, the detective quantum efficiency of computed tomographic (CT) reconstruction: the detection of, 291
Spatial reconstructor (DSR)—a high temporal resolution volume scanner, physics and technical considerations in the design of the dynamic, 382
Specifications and requirements of idealized radiographic equipment for routine chest examinations, 185
Spectra, determination of high-intensity x-ray, 2
Spectral artifacts and determination of electron density and atomic number from computed tomographic (CT) scans, correction of, 333
Statistics from computed tomography (CT) images, information and artifact in second-order, 250

Technical considerations in the design of the dynamic spatial reconstructor (DSR)—a high temporal resolution volume scanner, physics and, 382
Techniques, radiographic detectability of breast microcalcifications: *in vitro* studies using a wide variety of mammography, 129
Temporal resolution volume scanner, physics and technical considerations in the design of the dynamic spatial reconstructor (DSR)—a high, 382
Testing x-ray imaging performance, phantoms for, 319
Texture analysis of the lung fields in chest X rays, automated screening of chest X rays:, 108
Thermographic diagnosis, new detector system for high-resolution dynamic medical, 148
Thermography in given conditions, making an equipment allowing special liquid crystals sheets to be used for breast, 143
Thickness on depth-dose distribution of a computed tomography (CT) scan, effect of slice, 238
Three-dimensional phantoms and their cone-beam x-ray projections, rapid computer generation of, 287
Time scale sensitometric methods for evaluating screen-film systems, comparison of intensity and, 21
Time variations of x-ray beam characteristics, measurement of, 312
Tomographic (CT) images, display system for computed, 244
Tomographic (CT) images, use of scattered radiation measurements in radiotherapy dose calculations based on computed, 342
Tomographic (CT) imaging to radiotherapy planning, the application of computed, 348
Tomographic (CT) reconstruction: the detection of small objects, the detective quantum efficiency of computed, 291
Tomographic units, evaluation of computed, 216
Tomography (CT) scan, effect of slice thickness on depth-dose distribution of a computed, 238
Tomography (CT) scanner geometry, optimizing computed, 225
Tomographic (CT) scanner, an experimental computed, 324
Tomographic (CT) scans, correction of spectral artifacts and determination of electron density and atomic number from computed, 333
Tomography (CT) beam-hardening corrections, uncertainties generated by computed, 258
Tomography (CT) of the breast, progress in ultrasonic computed, 372
Tomography (CT) and conventional radiography, contrast-detail-dose evaluation of computed radiography: comparison with computed, 41
Tomography (CT) geometries, qualitative prediction of image discrepancies due to object-time dependence in several computed, 279

Tomography (CT) scanner, performance evaluation of a fourth-generation computed, 194
Tomography, illustration of a beam-hardening correction method in computerized, 264
Tomography and ultrasound video photography, film selection considerations for computed, 75
Translate-rotate head scanner with xenon detectors, performance characteristics of a, 208

Ultrasonic computed tomography (CT) of the breast, progress in, 372
Ultrasound video photography, film selection considerations for computed tomography and, 75
Uncertainties generated by computed tomography (CT) beam-hardening corrections, 258
Units, evaluation of computed tomographic, 216
Use of a multiformat camera for recording fluoroscopic images, 369
Use of scattered radiation measurements in radiotherapy dose calculations based on computed tomographic (CT) images, 342

Variations of x-ray beam characteristics, measurement of time, 312

Vascular disease, computer electronic radiography for early detection of, 88
Video photography, film selection considerations for computed tomography and ultrasound, 75
Visibility and dose measurements, mammography with magnification and grids detail, 135
Volume scanner, physics and technical considerations in the design of the dynamic spatial reconstructor (DSR)—a high temporal resolution, 382

Xenon detectors, performance characteristics of a translate-rotate head scanner with, 208
X-ray beam characteristics, measurement of time variations of, 312
X-ray equipment, monitoring the clinical use of diagnostic, 174
X-ray image intensifiers, quantum noise measurements for, 16
X-ray imaging performance, phantoms for testing, 319
X-ray-induced light photons emitted from radiographic $CaWO_4$ intensifying screens, measurement of the, 8
X-ray projections, rapid computer generation of three-dimensional phantoms and their cone-beam, 287
X-ray spectra, determination of high-intensity, 2
X rays: texture analysis of the lung fields in chest X rays, automated screening of chest, 108

Zeugmatographic imaging, nuclear magnetic resonance, 356
